Flossbach von Storch - Global Convertible Bond - I

INVESTMENT STRATEGY

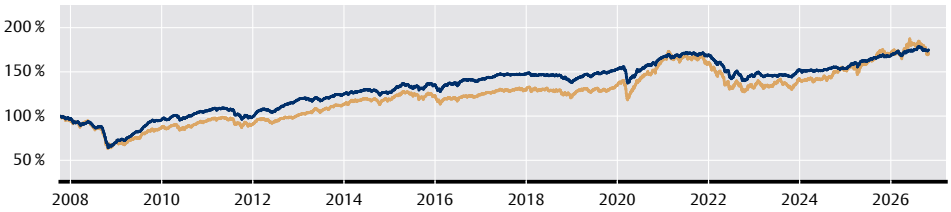

The Flossbach von Storch - Global Convertible Bond represents a defensive alternative to pure equity investments. The convex profile of convertible bonds enables investors to profit from rising prices on the equity market while at the same time limiting price risks. Security selection is based on a fundamental analysis process using in-house valuation models. If no convertible bond is available for an underlying security that appears attractive, or if its structure does not match the desired profile, the fund management can combine bond and call option to present a similarly attractive structure. Other in-house valuation models include ESG questions, and engagement. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. Foreign currency risks are currently largely hedged. The fund invests globally in convertible bonds.The Sub-Fund is actively managed. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The performance of the Sub-Fund is compared using the UBS Thomson Reuters Global Focus Hedged Convertible Bond Index as a benchmark. The investment manager is not linked to the Index at any time when making investment decision and the portfolio composition. Therefore, the performance of the Sub-Fund may differ significantly from the reported benchmark. The sub-fund complies with the standards for credit quality and credit limits in the insurance industry. The Sub-Fund is categorized as an Article 8 product under the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

MONTHLY COMMENTARY

October was characterised by growing doubts over the profitability of the billions being invested in AI. These concerns, compounded by financing worries and disappointing earnings releases towards the end of the month, triggered a significant rotation in markets – one that was barely reflected at index level (MSCI World: -0.75% in US dollar terms). The technology-heavy Nasdaq 100 lost 6.63%, whilst the hardware-heavy SOX fell by 15.3%. In contrast, the "broad market" and defensive sectors were in demand: the equally weighted S&P 500 rose by 5% over the reporting period and the Dow Jones by 1.76%, whilst the S&P 500 itself fell by 0.87% (all figures calculated in US dollars). In Europe, the STOXX Europe 600 gained 1.98%, led by stocks from the health care and consumer staples sectors. In Asia, the sell-off once again hit memory chip manufacturers the hardest – the KOSPI lost 16.2%, whilst the Nikkei and Hang Seng Index each fell by around 5.2% (calculated in local currency).
On the bond markets, there was a reversal of the trend seen in recent months. At the start of October, yields were still at multi-year highs – 10-year US Treasuries were yielding more than 5.3%, a level last seen in 2002, whilst German Bunds were yielding close to their highest level since 2009. From the middle of the month, the picture changed: the flight to safe havens triggered a rally that pushed the 10-year US Treasury yield back below the 5% mark. Over the month as a whole, US yields across the entire maturity spectrum fell by 30 to 37 basis points (bps), whilst German yields fell by 16 to 26 bps. The Federal Reserve maintained its target range at 3.75% to 4.00%; two members voted in favour of a rate rise, whilst the ECB left the deposit rate unchanged at 2.50%. By contrast, corporate bond spreads widened noticeably, particularly in the high-yield segment (iTraxx Europe Crossover Index: +25 bps). For convertible bonds, the negative impact of weakness in technology and semiconductor stocks, coupled with widening credit spreads, outweighed the benefits of falling yields. The Fund's benchmark index fell by 3.65% in October. Against this backdrop, the slightly positive performance of the Fund price (0.1 %) is very encouraging. The Fund delta was 42 % at the end of the month.

Flossbach von Storch - Global Convertible Bond - I

OPPORTUNITIES

+ Investing in funds can deliver an attractive result at a lower level of risk compared to a direct investment in equities.
+ Income can be generated from regular interest payments.
+ Convertible bonds can increase in value when equity markets rise.
+ Derivatives can be used to increase potential yields.
+ Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.

RISKS

- Investing in convertible bonds may entail price risks, especially in the case of rising interest rates on the capital markets.
- Convertible bonds can decline in value when equity markets fall.
- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. Screening against an exclusion list may partially restrict the range and number of eligible target investments.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).
- The straight concentration on special markets can have a negative impact because of the dependent performance of these selected markets.
- Investing in assets denominated in a foreign currency can have a negative impact on unit values as a result of exchange rate movements.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net subfund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium- to long-term: Minimum 4 years

RISK INDICATOR

Lower risk → Higher risk

1	**2**	3	4	5	6	7

The risk indicator assumes you keep the product for a minimum of 4 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator ("SRI") is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. Unusual market conditions could arise, for example, due to currency, creditworthiness, price, counterparty, liquidity and interest rate risks, as detailed in the sales prospectus. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the Fund's capacity to pay you. This product does not include any protection from future market performance. Please refer to the 'Risk' section of the sales prospectus for more details.
