Flossbach von Storch - Bond Defensive - I [2]

CATEGORY: BONDS AND CONVERTIBLES
Data as per 31 October 2026

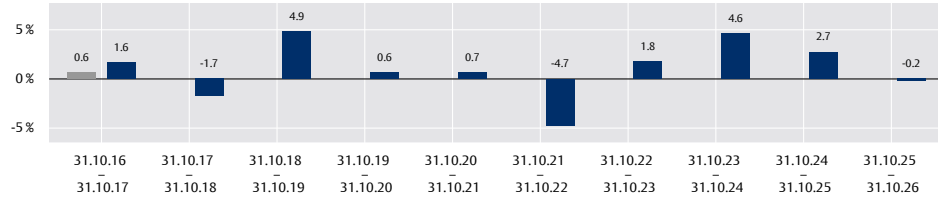

INVESTMENT STRATEGY

Flossbach von Storch - Bond Defensive is a globally diversified bond fund. The objective of the Fund Management is to generate the most stable possible returns for investors over time. The focus of the Fund is on government bonds, covered bonds, and investment-grade corporate bonds. The Fund flexibly takes advantage of the opportunities in the bond market; this distinguishes it from pure corporate bond or government bond funds. Foreign currency risks are largely hedged. Security selection is based on a fundamental analysis process. The fund manager relies on research tools developed in-house. Other in-house valuation models include ESG questions, and engagement. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account.

The Sub-Fund is actively managed and not benchmarked against an index. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The sub-fund complies with the standards for credit quality and credit limits in the insurance industry. The Sub-Fund is categorized as an Article 8 product within the meaning of the Disclosure Regulation (EU) 2019/2088 (SFDR).

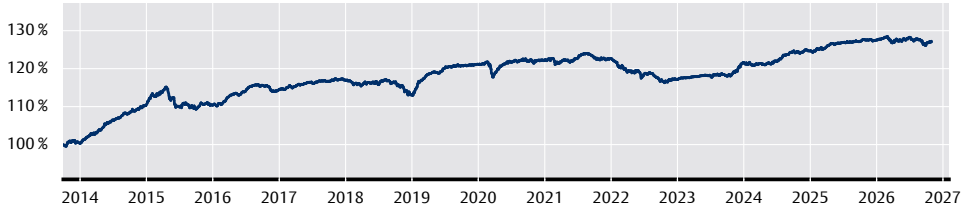

For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

MONTHLY COMMENTARY

Global bond markets recovered in October, although performance varied considerably beneath the surface. Central banks on both sides of the Atlantic left policy rates unchanged at their October meetings, providing little new impetus. Despite energy prices continuing to rise, prices of German Bunds and US Treasuries recovered noticeably from the yield highs seen at the end of September. In the five-year maturity segment, yields on German Bunds and US Treasuries fell by around 20 bps and just over 35 bps, respectively. In our view, recent market developments reflect not only the attractive valuations of high-quality bonds, but also growing concerns about a potential bursting of the AI bubble in the USA and the limits of the ECB's restrictive monetary policy stance. The latter has further clouded the outlook for France, where debt-servicing costs are already too high, triggering a sell-off in French government bonds (OATs). The risk premiums on 10-year OATs rose again against German Bunds over the course of the month by around 30 bps. Risk premiums on other spread products, such as Italian government bonds or corporate bonds, were also broadly around 10-15 bps higher for 10-year maturities. Thanks to our (moderately) aggressive duration of around three years and the portfolio's focus on quality, the Fund price recovered noticeably in October. Recent developments have reinforced our view that the ECB's restrictive stance poses increasing risks to the growth outlook and may lead to collateral damage. We are therefore maintaining the portfolio's interest-rate sensitivity at around three years. Beneath the surface, we have, in isolated cases, taken advantage of the widening of spreads on high-quality bonds to make selective additional purchases. We continue to avoid securities from highly indebted issuers (such as government bonds from France, Belgium and Italy) and anticipate greater differentiation between individual issuers and credit ratings in the coming months and quarters.

Flossbach von Storch - Bond Defensive - I

OPPORTUNITIES

+ Participate in global bond market growth.
+ Income can be generated from regular interest payments.
+ Active interest rate, currency and risk management (e.g. from the use of derivatives).

RISKS

- The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. Screening against an exclusion list may partially restrict the range and number of eligible target investments. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies, which are sometimes attributable to irrational factors on the markets particularly on the securities markets. Losses can occur when the market value of the assets decreases as against the cost price. If a unitholder sells units of the sub-fund at a time at which the value of assets in the sub-fund has decreased compared with the time of the unit purchase, he will not receive the full amount he has invested in the sub-fund. Despite the fact that each sub-fund aspires constant growth, this cannot be guaranteed.
- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price.
- Investing in bonds may entail price risks, especially in case of rising interest rates on the capital markets.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

CONSERVATIVE:

The fund is appropriate for conservative investors. Due to the composition of the net sub-fund assets, there is a moderate degree of risk but also a moderate degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium- to long-term: Minimum 3 years

RISK INDICATOR

Lower risk ⟷ Higher risk

1	**2**	3	4	5	6	7

The risk indicator assumes you keep the product for a minimum of 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.The summary risk indicator ("SRI") is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. Unusual market conditions could arise, for example, due to currency, creditworthiness, price, counterparty, liquidity and interest rate risks, as detailed in the sales prospectus. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the Fund's capacity to pay you. This product does not include any protection from future market performance. Please refer to the 'Risk' section of the sales prospectus for more details.
