

# Flossbach von Storch - Multiple Opportunities II - R

## INVESTMENT STRATEGY

The Fund pursues an **active investment approach**. The Fund Manager can invest flexibly in the asset classes that appear attractive from his/her point of view in the respective capital market environment; the equity component is at least 25 per cent.

The basis for asset allocation is the Fund's own **independent investment world view**. The Fund deliberately does not follow any benchmark index. The primary objective is to generate sustainably attractive returns. Whether an individual investment is attractive is assessed within the framework of a thorough company analysis.

The **risk-reward ratio** is decisive for every investment decision; the potential return must clearly overcompensate for any risk of loss. The portfolio structure is based on the five guidelines of the Flossbach von Storch Pentagram: diversification, quality, flexibility, solvency, and value. The composition of the portfolio is made by the Fund Manager exclusively in accordance with the criteria defined in the investment policy and is regularly reviewed and adjusted if necessary.

The investment strategy includes in-house valuation models, ESG integration, engagement, and the exercise of voting rights. In addition, exclusion criteria defined within the Sub-Fund's investment policy are taken into account. The sub-fund complies with the standards for credit quality and credit limits in the insurance industry. The Sub-Fund is categorized as an Article 8 product within the definition of the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the current Sales Prospectus and the Key Information Document (PRIIP-KID).

## EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5%, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

## MONTHLY COMMENTARY

Once again artificial intelligence (AI) dominated developments on the stock markets in May. This time, the spark for a new wave of enthusiasm was not the major platform companies, but quarterly results from the 'second tier' of the AI supply chain – companies such as Cisco and Micron, which gave a boost to semiconductor stocks, data centre suppliers and specialist software providers alike. The shift from optimism to euphoria is now complete. Headlines are driving share prices, whilst sober calculations regarding the long-term profitability of investments are taking a back seat. The situation remains different for software providers, whose shares have recently recovered after a weak start to the year: here, corporate results are at times showing high returns on capital – although the market is already pricing in the risk of disruption from AI for many stocks.

Energy shares, which had risen sharply since the outbreak of the Iran war, suffered a major setback in May. The trigger was (once again) US President Donald Trump, who, in the face of high oil and fuel prices – and the associated highest inflation in almost three years – fuelled fresh hopes for an early end to the war. Oil prices subsequently fell by more than 10 per cent over the course of the month. This is likely to help the strained consumer sector, as the new US Federal Reserve (Fed) Chair, Kevin Warsh, is faced with a stubborn inflationary environment and has little scope to cut interest rates. Yields on 10-year US government bonds stood at 4.4 per cent at the end of the month, once again slightly above the already high level of the previous month.

Within the portfolio, the positive effects of the drop in oil prices were particularly evident in cyclical stocks: Adidas, Mercedes-Benz and luxury goods manufacturer Richemont (Cartier) recorded share price gains. Shares in pharmaceuticals company Novo Nordisk also continued to make up ground. Alphabet delivered a further positive contribution to value in May thanks to its strength in the AI market. On the other hand, shares in Deutsche Börse, Chinese technology group Tencent and medical services provider Abbott Labs weighed on the Fund's unit price. We have newly added a position in Chinese battery and energy storage specialist CATL, which, as the global market leader, is benefiting from the increasing electrification of cars and demand for storage batteries.

## FUND MANAGEMENT

"Active, benchmark-independent portfolio management always starts with a blank sheet of paper."

# Flossbach von Storch - Multiple Opportunities II - R

## MONTHLY COMMENTARY - CONTINUED

The equity portfolio is broadly diversified across several sectors, with a focus on technology, consumer goods, healthcare and industrials. It is striking that all sectors not directly or indirectly seen as AI winners and associated with the construction of data centres are suffering from a lack of investor interest. By contrast, shares in software companies recovered again in May. The upcoming IPOs of SpaceX, Anthropic and OpenAI are casting their respective shadows. It is in the interests of all parties involved – the IPO newcomers, their suppliers, the investment banks and the US president – that the investment fervour does not die out too quickly. In the medium term, however, the sober figures will once again come to the fore, pushing dreams of colonising the Moon, Mars and power stations in space into the background as pie-in-the-sky scenarios with little substance. We left the gold and bond allocations largely unchanged in May with 8.9%. The continuing rise in government debt continues to provide a reason to hold on to gold (not physical), even though the price has already performed well recently.

## OPPORTUNITIES

- + Flexible investment policy without benchmarking.
- + Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals [indirect]). Market potential can be exploited by investing across a wide range.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.
- + Precious metals [indirect] (e.g. in the form of gold) can be used to increase potential yields.

## RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. The ESG criteria restrict the selection of target investments in terms of category and number, sometimes considerably. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the key information document (PRIIP-KID) and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

## INVESTOR PROFILE

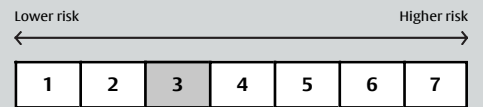

### GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

### INVESTMENT HORIZON:

Medium- to long-term: Minimum 4 years

## RISK INDICATOR

The risk indicator assumes you keep the product for 4 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact our capacity to pay you. Unusual market conditions could arise, for example, due to currency, creditworthiness, price, counterparty, liquidity and interest rate risks, as detailed in the sales prospectus.
