

Flossbach von Storch - Bond Opportunities - RT

INVESTMENT STRATEGY

Flossbach von Storch - Bond Opportunities is a globally diversified bond fund with an active investment approach that focuses on corporate bonds, government bonds and covered bonds. The fund flexibly exploits the opportunities of the entire bond market within the framework of the investment policy defined in the sales prospectus. In addition to bonds with an investment-grade quality, the fund management can also invest in bonds without a rating or in those that do not have investment-grade quality. Foreign currency risks are currently only entered into to a manageable extent. Security selection is based on a fundamental analysis process. The fund manager relies on research tools developed in-house. Other in-house valuation models include ESG questions, and engagement. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account.

The Sub-Fund is actively managed and not benchmarked against an index. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The sub-fund complies with the standards for credit quality and credit limits in the insurance industry. The Sub-Fund is categorized as an Article 8 product within the meaning of the Disclosure Regulation (EU) 2019/2088 (SFDR).

For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5%, €50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

MONTHLY COMMENTARY

In May, a marked divergence was discerned in the bond markets on both sides of the Atlantic. In the eurozone, yields fell, whilst the yield curve steepened noticeably (the decline in yields was more pronounced for short and medium-term maturities). This development was driven by growing hopes of a swift resolution to the Iran conflict and the resulting decline in inflation expectations. The market's previously extremely restrictive expectations regarding the path of key interest rates were scaled back accordingly over the course of the month.

On the other side of the Atlantic, however, the US yield curve flattened – with a sharp rise in yields for short maturities. The slight decline in US inflation expectations was more than offset here by a rising real interest rate component – driven primarily by hawkish comments from the US Federal Reserve (Fed). The newly appointed Fed Chair, Kevin Warsh, also struck a more restrictive tone (than expected), dashing any hopes of interest rate cuts and even leading the market to price in (almost) a full rate hike by the end of the year.

On a month-on-month basis, the yield on two-year German government bonds was around 11 basis points (bp) lower, whilst the yield on 30-year bonds was around five bp lower. For US Treasuries, the yield on two-year bonds rose by around 13 bp, whereas the yield on 30-year maturities remained virtually unchanged over the month. Spread products (such as corporate bonds) benefited from improved risk sentiment compared with the previous month – risk premiums declined accordingly.

In the Fund, we used this improved market sentiment during the wave of new issues in the middle of the month as an opportunity to switch older bonds in the portfolio to high-quality new issues on attractive terms. We also remained very active on the duration front. Due to the rapidly changing volatility landscape, we once again wrote puts on interest rate futures on German government bonds and US Treasuries, later repurchased them, and rolled them into directional futures.

status: 30.04.26

Flossbach von Storch - Bond Opportunities - RT

OPPORTUNITIES

- + Participate in global bond market growth.
- + Income can be generated from regular interest payments.
- + Active interest rate, currency and risk management (e.g. from the use of derivatives).

RISKS

- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Investing in bonds may entail price risks, especially in case of rising interest rates on the capital markets.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

CONSERVATIVE:

The fund is appropriate for conservative investors. Due to the composition of the net sub-fund assets, there is a moderate degree of risk but also a moderate degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium-term: At least 3 years

RISK INDICATOR

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you. Unusual market conditions could arise, for example, due to currency, credit-worthiness, price, counterparty, liquidity and interest rate risks, as detailed in the sales prospectus.
