

Flossbach von Storch III SICAV - Global Dynamic Wealth - IT

INVESTMENT STRATEGY

The objective of the investment policy of Flossbach von Storch III SICAV - Global Dynamic Wealth ('sub-fund') is to achieve reasonable growth while taking into consideration the risk involved for investors. The investment strategy is based on a fundamental analysis of global financial markets. The fund manager composes the portfolio according to the criteria defined in the investment policy, reviews it regularly, and adjusts it if necessary. The sub-fund is actively managed. No index is used for comparison purposes. At least 50% and at most 85% of the sub-fund's net assets are invested in equities. The sub-fund may also invest in bonds, money market instruments, convertible bonds, derivatives, precious metals, and bank deposits. The fund may invest worldwide; there is no regional restriction. Shares in UCITS or other UCIs ("target funds") are only acquired up to a maximum limit of 10% of the sub-fund's net assets; the sub-fund is therefore eligible for target funds. In principle, the sub-fund may invest without restriction in all eligible assets listed in Article 4 of the Articles of Association. The use of derivative financial instruments ("derivatives") is intended to achieve the aforementioned investment objectives for both investment and hedging purposes. Detailed information on the aforementioned and any other investment opportunities of the sub-fund can be found in the currently valid sales prospectus. This sub-fund may not be suitable for investors who wish to withdraw their money from the sub-fund within a period of 4 years. This share class distributes the income it generates to investors. The sub-fund promotes environmental and social characteristics as defined in Article 8 of Regulation (EU) 2019/2088. Flossbach von Storch follows a holistic sustainability approach across the group: As a long-term investor, Flossbach von Storch attaches importance to companies managing their environmental and social footprint responsibly and actively countering the negative effects of their activities.

In accordance with regulatory requirements, we are not permitted to provide performance figures for this share class, as it has been active for less than a year.

at Flossbach von Storch since 2012.

Flossbach von Storch III SICAV - Global Dynamic Wealth - IT

OPPORTUNITIES

- + Flexible investment policy without benchmarking.
- + Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals [indirect]). Market potential can be exploited by investing across a wide range.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.
- + Precious metals [indirect] (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- **Market risks:** The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. The ESG criteria restrict the selection of target investments in terms of category and number, sometimes considerably. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- **Currency risks:** If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- **Credit risks:** The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- **Interest change risks:** Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- **Risks relating to the use of derivatives:** The fund may enter into derivative transactions for the purposes listed in the key information document (PRIIP-KID) and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- **Risks of precious metals and commodities:** Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium- to long-term: Minimum 4 years

RISK INDICATOR

The risk indicator assumes you keep the product for 4 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact our capacity to pay you. Unusual market conditions could arise, for example, due to currency, creditworthiness, price, counterparty, liquidity and interest rate risks, as detailed in the sales prospectus.
