

Flossbach von Storch - Global Quality - F²

INVESTMENT STRATEGY

Flossbach von Storch - Global Quality is a globally diversified equity fund with an active and focused investment approach. At least 60 per cent of the Fund's assets are invested directly in equities and equity funds. The investment focus is on first-class, highly capitalised business models that are growing at an above-average rate and reliably, are highly profitable and stable, and are led by entrepreneurial management teams. The quality assessment of the business models and the weighing of the risk-reward ratio within the framework of the company valuation are decisive for every investment decision. The fund management pursues a long-term investment horizon and understands risk as an economic dimension. As a rule, investments are made in a maximum of 50 companies. Other in-house valuation models include ESG issues, engagement, and voting. In addition, exclusion criteria defined within the framework of the Sub-Fund's investment policy are taken into account. The Sub-Fund is actively managed. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The performance of the Sub-Fund is compared using the MSCI World Net Total Return Index as a benchmark. The fund manager is not linked to the index at any time when making investment decisions and the portfolio composition. Therefore, the performance of the Sub-Fund may differ significantly from the benchmark shown. The Sub-Fund is classified as an Article 8 product under the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5%, €50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

MONTHLY COMMENTARY

Equity markets got off to a turbulent start in August. On the third day of trading, the Japanese Nikkei equity index lost 12.4% – the biggest daily loss since “Black Monday” in 1987. The stock markets in Europe and the USA also recorded losses throughout the day. This was driven primarily by the technology sector, which, measured by the tech-heavy US Nasdaq index, lost a good 14% at its peak (in euros, including dividends) after a very strong performance over the course of the year from its high in mid-July. However, emerging concerns about a market panic subsided almost as quickly as they had arisen. As the month progressed, the global MSCI World equity index made up all its initial losses and closed the month up 0.3% (in euros, including dividends). The Nasdaq also recovered, but still closed the month with a slight loss. In terms of individual stocks in the portfolio, there was a mixture of positive and negative developments during the month under review. Positive value contributions came from our holdings in US conglomerate Berkshire Hathaway and German financial services provider Deutsche Börse, both of which reported quarterly figures. Berkshire Hathaway, which is managed by Warren Buffett, performed particularly well in the insurance business. The announcement of a significant reduction in its position in Apple was also noteworthy, with Berkshire’s cash position rising to a new record of USD 277 billion. Over the course of the month, the company also became the first one outside of the major US technology groups to join the group of companies with a market capitalisation of more than USD one trillion. Deutsche Börse recorded a pleasing quarter across all business segments. The company was able to increase its turnover by 19% year-on-year, which is partly due to last year’s acquisition of SimCorp, a provider of software for asset managers. In contrast, our investment in US retailer Dollar General made a negative value contribution. After many successful years, the company recently found itself in troubled waters, reporting weak quarterly figures and having to significantly reduce its full-year outlook against the backdrop of a weakening US consumer at the lower end of the income spectrum. However, part of the truth may also be that the improvement measures taken by the CEO, who returned to office just under a year ago, are having a slower impact than hoped for.

Flossbach von Storch - Global Quality - F

OPPORTUNITIES

- + These funds aim to exploit growth opportunities on global equity markets.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.

RISKS

- Equity markets and thus also unit values can experience severe fluctuations in response to market developments. The result can be a fall in the trading price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Investing in assets denominated in a foreign currency can have a negative impact on unit values as a result of exchange rate movements.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: over 5 years

RISK INDICATOR

Lower risk ← Higher risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you.
