

Flossbach von Storch - Global Convertible Bond - R

INVESTMENT STRATEGY

The Flossbach von Storch - Global Convertible Bond represents a defensive alternative to pure equity investments. The convex profile of convertible bonds enables investors to profit from rising prices on the equity market while at the same time limiting price risks. Security selection is based on a fundamental analysis process using in-house valuation models. If no convertible bond is available for an underlying security that appears attractive, or if its structure does not match the desired profile, the fund management can combine bond and call option to present a similarly attractive structure. Other in-house valuation models include ESG questions, and engagement. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. Foreign currency risks are currently largely hedged. The fund invests globally in convertible bonds. The Sub-Fund is actively managed. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The performance of the Sub-Fund is compared using the UBS Thomson Reuters Global Focus Hedged Convertible Bond Index as a benchmark. The investment manager is not linked to the Index at any time when making investment decision and the portfolio composition. Therefore, the performance of the Sub-Fund may differ significantly from the reported benchmark. The Sub-Fund is categorized as an Article 8 product under the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

MONTHLY COMMENTARY

In November, the equity markets were unable to continue their upward trend that had begun in mid-April. After several months of strong gains, growing concerns about a possible overvaluation in the technology and AI sectors led to a correction. Despite solid overall corporate earnings reports, macroeconomic concerns prevailed, causing the previously optimistic market sentiment to cool somewhat. In the USA, the technology-heavy Nasdaq 100 recorded the largest monthly loss among the prominent US equity indices, falling 1.6%. European markets largely escaped this trend reversal, with the STOXX Europe 600 even posting a 1% gain for the month. In Asia, the winners of the previous months were the biggest losers in the reporting period. Japan's Nikkei 225 lost over 4.1%, while South Korea's Kospi fell 4.3%. The Hang Seng Index in Hong Kong, conversely, remained largely stable and closed virtually unchanged. Due to the government shutdown that lasted until mid-November, no inflation data was published in the USA for October. However, dovish comments by two central bankers fuelled hopes of a further interest-rate cut by the Federal Reserve in December, causing US Treasury yields to fall, particularly at the short end of the yield curve. In the eurozone, the European Central Bank (ECB) remained cautious and signalled its intention to maintain its interest-rate level. As a result, yields in the eurozone rose moderately, mirroring US yields. Risk premiums for corporate bonds remained robust despite the weak equity markets and even fell slightly. Weak equity markets and slightly higher interest rates in the eurozone weighed on the convertible bond markets, causing the global market (as measured by the benchmark index) to decline by around 2% in November. Due to the Fund's more conservative investment approach compared to the benchmark, the Fund's share price fell by only -0.2 % during the reporting period. At the end of the month, the delta at fund level was 40%, roughly the same as in the previous month.

Flossbach von Storch - Global Convertible Bond - R

OPPORTUNITIES

- + Investing in funds can deliver an attractive result at a lower level of risk compared to a direct investment in equities.
- + Income can be generated from regular interest payments.
- + Convertible bonds can increase in value when equity markets rise.
- + Derivatives can be used to increase potential yields.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.

RISKS

- Investing in convertible bonds may entail price risks, especially in the case of rising interest rates on the capital markets.
- Convertible bonds can decline in value when equity markets fall.
- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).
- The straight concentration on special markets can have a negative impact because of the dependent performance of these selected markets.
- Investing in assets denominated in a foreign currency can have a negative impact on unit values as a result of exchange rate movements.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: ≥ 5 years

RISK INDICATOR

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you. Unusual market conditions could arise, for example, due to currency, credit-worthiness, price, counterparty, liquidity and interest rate risks, as detailed in the sales prospectus.
