

# Flossbach von Storch - Bond Opportunities - RT

## INVESTMENT STRATEGY

Flossbach von Storch - Bond Opportunities is a globally diversified bond fund with an active investment approach that focuses on corporate bonds, government bonds and covered bonds. The Fund flexibly exploits the opportunities of the entire bond market. In addition to bonds with an investment-grade quality, the fund management can also invest in bonds without a rating or in those that do not have investment-grade quality. Foreign currency risks are currently only entered into to a manageable extent. Securities selection is based on a fundamental research and analysis process. The fund manager relies on research tools developed in-house. The investment strategy includes in-house valuation models, ESG integration, engagement and voting. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. The Sub-Fund is actively managed and not benchmarked against an index. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The Sub-Fund is classified as an Article 8 product within the meaning of the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

## EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

## MONTHLY COMMENTARY

The rally on the global bond markets continued at the start of the month. The reasons for this were the market turbulence in Japan and the increasingly noticeable weakness in the US labour market. The unemployment rate in the USA rose to 4.3% in August, reaching an upward momentum that has regularly been observed in the run-up to recessions in the past. This development also appears to be increasingly coming to the attention of the US Federal Reserve (Fed) and was addressed accordingly by Fed Chair Jerome Powell at the annual central bank meeting in Jackson Hole towards the end of August. Against this backdrop, yields on US Treasuries reached new lows for the year, with the inversion of the US yield curve being significantly reversed. In the eurozone, German Bunds with short and medium maturities also benefited from this development, while yields on Bunds at the ultra-long end remained virtually unchanged month-on-month. However, some of the interest-rate movement from the first half of the month dissipated again at the end of the month, meaning that the change compared to the previous month was not particularly significant despite the temporary nervousness, weaker data and clear words from Fed Chair Powell. The risk premiums on corporate bonds rose sharply at times during the turbulence in Japan amid thin summer liquidity. In the subsequent recovery, however, higher-quality bonds lagged behind their lower-rated counterparts. With the rally at the start of the month, we reduced the duration by taking profits on some derivative positions and, in return, counter-cyclically bought corporate bonds of various quality grades in euros and US dollars during the turbulence. As a result of this combination, the portfolio duration was temporarily somewhat lower. It was later increased again when we successively bought high-quality corporate bonds that were lagging behind the recovery and only added a small amount of new interest-rate hedges.

# Flossbach von Storch - Bond Opportunities - RT

## OPPORTUNITIES

- + Participate in global bond market growth.
- + Income can be generated from regular interest payments.
- + Active interest rate, currency and risk management (e.g. from the use of derivatives).

## RISKS

- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Investing in bonds may entail price risks, especially in case of rising interest rates on the capital markets.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

## INVESTOR PROFILE

### CONSERVATIVE:

The fund is appropriate for conservative investors. Due to the composition of the net sub-fund assets, there is a moderate degree of risk but also a moderate degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

### INVESTMENT HORIZON:

Medium-term: 3 to 5 years

## RISK INDICATOR

Lower risk Higher risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you.
