

Flossbach von Storch - Bond Opportunities - RT

INVESTMENT STRATEGY

Flossbach von Storch - Bond Opportunities is a globally diversified bond fund with an active investment approach that focuses on corporate bonds, government bonds and covered bonds. The Fund flexibly exploits the opportunities of the entire bond market. In addition to bonds with an investment-grade quality, the fund management can also invest in bonds without a rating or in those that do not have investment-grade quality. Foreign currency risks are currently only entered into to a manageable extent. Securities selection is based on a fundamental research and analysis process. The fund manager relies on research tools developed in-house. The investment strategy includes in-house valuation models, ESG integration, engagement and voting. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. The Sub-Fund is actively managed and not benchmarked against an index. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The Sub-Fund is classified as an Article 8 product within the meaning of the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5%, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

MONTHLY COMMENTARY

After rallying in the previous months, global bond markets corrected in October, with a differentiation observed on both sides of the Atlantic. While yields on two- and 10-year US Treasuries rose by around 50 basis points (bps), yields on German Bunds with the same maturities were up almost 25 basis points (bps) month-on-month. Triggering the rise in yields was a strong US labour market report. During the course of the month, the 'Trump momentum' in the polls for the US elections on November 5 led to concerns about a rising volume of US government bond issues. While fiscal consolidation was not to be expected from either of the two presidential candidates, Trump's programme in particular is likely to further exacerbate the already existing fiscal problems. In this environment, euro bonds were able to hold their own better but could not completely escape the upward pressure on yields from the USA. Comments by some members of the European Central Bank (ECB), noting that disinflation is progressing faster than expected, while growth risks are increasing, had a supportive effect. Credit spreads buffered parts of the interest-rate increase in the portfolio, with the result that the remaining excess returns at low levels continued to decline. Against this backdrop, we gradually increased portfolio duration during phases of weakness in the euro bond market, while taking profits on corporate bonds. Inflation-protected securities were on the shopping list, as the rise in interest rates was only to a limited extent accompanied by higher inflation expectations in the valuation of these securities. For the first time in a while, we purchased government bonds from Australia and New Zealand. They offer a similarly high interest rate as in the USA, with lower currency hedging costs. In addition, there is less structural risk with regard to a possible oversupply of these securities in the market. The measures not only increased the average yield in the portfolio, but also the credit quality, with a high AA rating.

status: 30.09.24

Flossbach von Storch - Bond Opportunities - RT

OPPORTUNITIES

- + Participate in global bond market growth.
- + Income can be generated from regular interest payments.
- + Active interest rate, currency and risk management (e.g. from the use of derivatives).

RISKS

- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Investing in bonds may entail price risks, especially in case of rising interest rates on the capital markets.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

CONSERVATIVE:

The fund is appropriate for conservative investors. Due to the composition of the net sub-fund assets, there is a moderate degree of risk but also a moderate degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium-term: 3 to 5 years

RISK INDICATOR

Lower risk Higher risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you.
