

Flossbach von Storch - Bond Opportunities - CHF-RT⁴

INVESTMENT STRATEGY

Flossbach von Storch - Bond Opportunities is a globally diversified bond fund with an active investment approach that focuses on corporate bonds, government bonds and covered bonds. The Fund flexibly exploits the opportunities of the entire bond market. In addition to bonds with an investment-grade quality, the fund management can also invest in bonds without a rating or in those that do not have investment-grade quality. Foreign currency risks are currently only entered into to a manageable extent. Security selection is based on a fundamental analysis process. The fund manager relies on research tools developed in-house. Other in-house valuation models include ESG questions, engagement, and voting. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. The share class is hedged against currency fluctuations affecting the Sub-Fund currency.

The Sub-Fund is actively managed and not benchmarked against an index. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The Sub-Fund is categorized as an Article 8 product within the meaning of the Disclosure Regulation (EU) 2019/2088 (SFDR).

For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

MONTHLY COMMENTARY

In June, the global bond markets once again presented a varied picture, with some of the yield movements of the previous month being revised. While US bonds (currency-hedged) performed positively, euro bonds saw a slight consolidation. The ECB lowered its deposit rate again by 25 basis points (bps) to 2%, thereby reaching the centre of its neutral key interest rate range of 1.75 - 2.25%. At the same time, ECB President Lagarde hinted that the cycle of interest-rate cuts could be largely over for the time being – this caused some disillusionment for euro bonds. Looking ahead, however, large parts of the ECB Governing Council are concerned about further growth risks – and are open to an accommodative monetary policy stance with further easing. In a monthly comparison, the yield on five-year German Bunds was around 10 bps higher. On the other side of the Atlantic, however, surprisingly 'dovish' comments from Fed members Waller and Bowman pushed US yields lower by opening the door wide for further easing in the near future. The yield on five-year US Treasuries was thus around 16 bps lower month-on-month. The geopolitical escalation in the Middle East only had a brief impact on the bond market and risk sentiment. The risk premiums on corporate bonds widened only temporarily and were even slightly narrower compared to German Bunds on a monthly comparison. Particularly in areas with higher credit risks, such as the high-yield segment, risk premiums fell back to the historically low levels of February. For this reason, we began to reduce the Fund's allocation to corporate bonds in medium and weaker quality categories. We also reduced interest-rate sensitivity there (keyword: credit duration). Nevertheless, the overall duration increased slightly, as we felt that the minor setbacks in euro government bonds offered opportunities and the emerging change in sentiment in the USA made larger positions possible.

Flossbach von Storch - Bond Opportunities - CHF-RT

OPPORTUNITIES

- + Participate in global bond market growth.
- + Income can be generated from regular interest payments.
- + Active interest rate, currency and risk management (e.g. from the use of derivatives).

RISKS

- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Investing in bonds may entail price risks, especially in case of rising interest rates on the capital markets.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

CONSERVATIVE:

The fund is appropriate for conservative investors. Due to the composition of the net sub-fund assets, there is a moderate degree of risk but also a moderate degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium-term: 3 to 5 years

RISK INDICATOR

The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you.
