

Flossbach von Storch - Multiple Opportunities II - IT

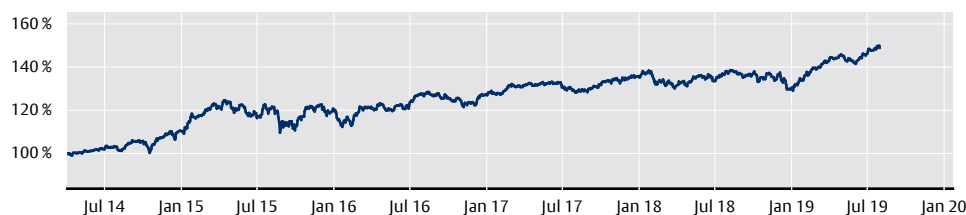

INVESTMENT STRATEGY

The fund pursues an active investment approach. The fund manager can invest in any investment classes that, in his/her opinion, appear to be attractive in the relevant capital market environment. The equity component amounts to at least 25 per cent. The basic principle for asset allocation is an idiosyncratic, independent view of the world. A thorough company analysis is performed to assess whether an individual investment is attractive. A determining factor for each investment decision is the risk/ reward ratio. The potential for yield must considerably overcompensate for any risks of loss. The portfolio structure, and thus the fund's risk/reward profile, is aligned to the five Flossbach von Storch pentagram pillars, particularly the diversification principle. The fund is deliberately not oriented to any benchmark index. The main aim is to make attractive yields on a permanent basis.

ANNUAL PERFORMANCE IN EUR (IN %)

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services.

Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.

The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance.

Past performance is not a reliable indicator of future performance.

MONTHLY COMMENTARY

The corporate reporting season that began in July paled almost into insignificance on the capital markets. Instead, the focus was again on the major central banks, whose monetary policies are becoming even more expansive. For example, for the first time since the financial crisis, the US Federal Reserve (Fed) lowered its key interest rates – by 0.25 percentage points to 2.0 to 2.25 per cent. The Fed thus bowed to pressure from the markets and politics, but was not able to fully comply with their expectations. The European Central Bank proved creative. The EU's inflation target, which is actually defined in its treaties as "below, but close to, two per cent", is now being interpreted as "symmetrical". This has already provided the justification for a further monetary policy loosening in September. German government bonds (Bunds) with a maturity of up to 23 years had a negative yield and those with 10-year maturities fell to a new low of below -0.4 per cent. The yield gap with Italy fell back below two percentage points due to the reaffirmed monetary policy mutual support pact. Equities remain attractively valued relative to secure bonds, which in terms of yields are listed as negative. Gold (held indirectly), which serves a hedging function in the portfolio, can be held without opportunity costs. In July, the Fund not only benefited from price gains, but also from currency positioning. As the euro devalued by 2.6 per cent against the US dollar, the Fund benefited from the US equities held, whose currency development is not hedged for diversification reasons. Driven by positive developments in equity prices and exchange rates along with the price of gold, the Fund achieved a new high over the course of the month. We are very flexible in this environment without completely relinquishing the potential for increased value, as reflected in the equity allocation of 62.1 %, which is largely unchanged from the previous month. With a liquidity ratio of 18.0 %, we believe that we are in a reasonable position in the general uncertain environment to take advantage of any potential price reverses.

OPPORTUNITIES

- + Flexible investment policy without benchmarking.
- + Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals indirect). Market potential can be exploited by investing across a wide range.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.
- + Precious metals (indirect) (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the KIID and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZONT:

Long-term: over 5 years

RISK/RETURN PROFILE

Low risk ← → High risk
Potentially low revenue ← → Potentially high revenue

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The historical data used for calculating the synthetic indicator is not a reliable indication of the future risk and reward profile of the share class. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment. This share class has been placed in the aforementioned risk class because its unit price is subject to medium to significant fluctuation, therefore the profit potential and loss exposure may be moderate to high. Because of the calculation model used, all risks may not be taken into consideration when placing the share class in a risk class. Detailed information can be found in the section entitled "Risks" of the prospectus.
