

Flossbach von Storch - Global Quality - I²

INVESTMENT STRATEGY

Flossbach von Storch - Global Quality is a global equity fund with an active, focussed investment approach. The focus is on long-term holdings in companies (real value concept), not short-term speculation. We therefore focus on the quality of the company, which is determined by the strength and predictability of the expected earnings performance. We value a strong and sustainable competitive position, a healthy balance sheet, attractive target markets and management with integrity and competence. High-quality companies tend to have above-average returns on invested capital and strong resilience to adverse developments. All investment decisions are based on a sound assessment of quality and valuation. We understand risk as an economic dimension, i.e. the danger of a permanent loss of capital as opposed to short-term fluctuations. Other in-house valuation models include ESG issues, engagement, and voting. In addition, exclusion criteria defined within the framework of the Sub-Fund's investment policy are taken into account.

The Sub-Fund is actively managed. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The performance of the Sub-Fund is compared using the MSCI World Net Total Return Index as a benchmark. The fund manager is not linked to the index at any time when making investment decisions and the portfolio composition. Therefore, the performance of the Sub-Fund may differ significantly from the benchmark shown. The Sub-Fund is categorized as an Article 8 product under the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

MONTHLY COMMENTARY

Inflation in the USA has still not been (completely) defeated, while the labour market is showing increasing signs of weakness. In this challenging environment, the US Federal Reserve lowered key interest rates for the first time since December 2024. Regarding the US real economy, the sustainability of growth-driving investments in artificial intelligence (AI) is becoming increasingly important. The AI euphoria in turn drove the stock markets. On 10 September, Oracle's share price rose by an extraordinary 40% in a single day after the company announced that it had received orders worth USD 300 billion from OpenAI. The circular relationship between clients and customers is interesting: in order for Oracle to build the data centres for OpenAI, it has to buy graphics chips from Nvidia. Meanwhile, OpenAI lacks the money to secure Oracle's cloud capacity, which is why Nvidia is investing USD 100 billion in OpenAI – ultimately pre-financing its own chips. This circular relationship could end up being profitable for everyone if OpenAI continues to significantly improve its models and generates hundreds of billions or even trillions of US dollars in revenue. However, the 'stakes' in the AI race – and with them the risk of misallocation and overinvestment – have undoubtedly risen. In our portfolio, we try to counteract this with healthy diversification and valuation discipline, without losing sight of the opportunities. In line with the AI euphoria, the three largest positive value contributions in September came from our investments in three US companies: semiconductor equipment supplier Applied Materials, Google's parent company Alphabet, and Amphenol, whose AI data centre equipment division has recently recorded very high growth rates. Alphabet also received a boost in early September when a judge announced significantly milder conditions than feared in a competition case. The largest negative value contributions came from our investments in Canadian enterprise software provider Constellation Software, Danish medical technology group Coloplast and US financial services provider S&P Global. Constellation Software announced the resignation of its founder Mark Leonard in September due to health reasons. Coloplast was weighed down by a US government investigation into possible import tariffs that could affect parts of the company's product portfolio.

Flossbach von Storch - Global Quality - I

OPPORTUNITIES

- + These funds aim to exploit growth opportunities on global equity markets.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.

RISKS

- Equity markets and thus also unit values can experience severe fluctuations in response to market developments. The result can be a fall in the trading price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Investing in assets denominated in a foreign currency can have a negative impact on unit values as a result of exchange rate movements.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: ≥ 5 years

RISK INDICATOR

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you.
