

Flossbach von Storch - Global Convertible Bond - R

INVESTMENT STRATEGY

The Flossbach von Storch - Global Convertible Bond represents a defensive alternative to pure equity investments. The convex profile of convertible bonds enables investors to profit from rising prices on the equity market while at the same time limiting price risks. Security selection is based on a fundamental analysis process using in-house valuation models. If no convertible bond is available for an underlying security that appears attractive, or if its structure does not match the desired profile, the fund management can combine bond and call option to present a similarly attractive structure. Other in-house valuation models include ESG questions, engagement, and voting. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. Foreign currency risks are currently largely hedged. The fund invests globally in convertible bonds. The Sub-Fund is actively managed. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The performance of the Sub-Fund is compared using the UBS Thomson Reuters Global Focus Hedged Convertible Bond Index as a benchmark. The investment manager is not linked to the Index at any time when making investment decision and the portfolio composition. Therefore, the performance of the Sub-Fund may differ significantly from the reported benchmark. The Sub-Fund is classified as an Article 8 product under the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5%, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

MONTHLY COMMENTARY

At the start of the month, the ECB lowered its key interest rate by 0.25 per cent for the first time in five years. This means that the deposit rate now stands at 3.75 per cent. At the same time, ECB President Christine Lagarde announced an upwardly revised inflation forecast for 2024 and 2025. The battle against inflation therefore does not as yet appear to have been won, which is why this interest-rate hike should not be interpreted as the starting signal for a major turnaround in interest rates. Aside from this, the main focus was on the political uncertainty following the European elections and in the run-up to the new French elections called by French President Macron. On the other side of the Atlantic, the US Federal Reserve also raised its inflation projection for the current year and left the key interest rate at 5.25-5.50 per cent. Fed Chair Powell also emphasised that no central bank member's baseline scenario envisages a further rate hike; at the same time, the quarterly dot plot now only points to a rate cut in 2024. Inflation momentum weakened for the first time in months, while labour market data once again surprised on the upside. The bond markets performed well overall in this environment, with yields falling, particularly on short- and medium-term German government bonds and US government bonds. French government bonds saw a sell-off as a result of the political unrest, causing their yields to rise and the gap between them and yields on German government bonds to temporarily climb to their highest level since 2012. Risk premiums on corporate bonds, particularly for sub-investment grade qualities, rose slightly from their low levels. Global stock markets showed a mixed performance: while the shares of major US technology companies continued to rise, the shares of US companies with a lower market capitalisation suffered price declines. Shares in European companies also lost ground due to the political unrest. Convertible bonds posted a slightly positive performance; measured against the Refinitiv Global Focus Index (Euro hedged), the increase was 0.38 per cent. The Fund's unit price showed a stable performance over the same period (0.0 %). The equity sensitivity in relation to convertible bonds was virtually unchanged at 28 per cent at the end of June, while the equity sensitivity at Fund level (including cash, call options and bonds) was 22 per cent at the end of the month.

Flossbach von Storch - Global Convertible Bond - R

OPPORTUNITIES

- + Investing in funds can deliver an attractive result at a lower level of risk compared to a direct investment in equities.
- + Income can be generated from regular interest payments.
- + Convertible bonds can increase in value when equity markets rise.
- + Derivatives can be used to increase potential yields.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.

RISKS

- Investing in convertible bonds may entail price risks, especially in the case of rising interest rates on the capital markets.
- Convertible bonds can decline in value when equity markets fall.
- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).
- The straight concentration on special markets can have a negative impact because of the dependent performance of these selected markets.
- Investing in assets denominated in a foreign currency can have a negative impact on unit values as a result of exchange rate movements.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: over 5 years

RISK INDICATOR

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you.
